

HE Dr. Talal Abu-Ghazaleh Speech at the Bosphorus Summit in Istanbul, Turkey

Nov 26, 2018

I have very quick five messages and I am always reminded by Winston Churchill who's aid the greatest lesson in life that idiots are sometimes right !so even if I am an idiot I could be right!.

1. I would like you to have a look at my book about **future reality** which I provided the conference with copies of it which was just come out and recently published, I wrote a book about brave knowledge world it is the perception of how we would be living in few decades and at that time our grandchildren will think that now we are at the stone age because we will be living in a completely different world and I wanted to present the realistic future in this book.
2. **Education.** I addressed the Arab regional meeting for education, and I said I will sue the educational system of the world , universities and schools are not providing our young generation with the right education , in the knowledge age there is nothing a teacher can give to a student which is not already on the internet which is already has been seen by a student , our universities graduate students who are jobs seekers and the most of them are

unemployed , what we need an education to graduate inventors , innovators and this what we do at TAG University of Innovation , that started its program this year as it is the first of its kind in the world where students do not set for exams , you do not listen to teachers , you just INVENT! And if you do not invent you do not graduate!

3. I want to say very briefly that I uploaded choice of themes for this conference **Global Peace and Development** there is no hope of global peace and development in this knowledge age on panel discussion like this I have the honor for being with Bill Gates and we talked about this future how we will transmit into better world and the conscious was after the knowledge age “maybe at the end of this century!) We will be moving into the wisdom age where everything we do, everything we invent, every discipline we create will be directed for goodness and not for success and not for profit and not for the power, but for the benefit of the people all over the people.

- Number 4. **Global sustainable development** that can only be achieved through a global system, with no trade barriers and no trade walls, it is a waste of time talking about the future, having served on the strategy board of the world trade organization about the future of the trade I can say that this can only be achieved if we moved from protectionism to liberalization and that something unfortunately is not happening.
- I would like to close with unhappy prediction, again you can take me as a fool! I have predicted that in 2020 the world will go into a very **serious economic crisis**, that crisis will end up with what we call it in economic stagflation, stagflation with inflation it will hit all the world in different ratios! as a result of these prediction I am working with research centers in U.S and I thought it was my duty to create and spread awareness about this , researches centers in U.S predicted as a result of this crisis we will be heading towards a third world war , it is an evitable that this crisis has to end with a war because wars end with agreements and there are leaders in the world who believe that we need a new world war and therefore we need to have in order to set and draft these agreements that would be a new world and unfortunately it is coming after tomorrow in 2020 and remember this as I am talking responsibility of what I am saying and I would like to research it as you can see the signs growing all over the world in every country there are social problems and economic complaints and everything that will complex and end up with a war after economic crisis , I sorry to sound pessimistic but truly I am not, I am optimistic as after this war we will have a better world , a new era , we know how to start wars but not how to end them but at the end a better world is coming.
