

Speech of Dr. Talal Abu-Ghazaleh

“Mega Science Infrastructure to Create the Industry of the Future”

Petersburg International Economic Forum 2019

12/06/2019

I am honored to be among this distinguished group of scientists ,personal I am not a scientist I am an educator , so let me start in just with minute about my background, I chair the global leader of intellectual property protection as we are the number of intellectual property service providers in the world , 110 offices in the world including Moscow, also I am chairing the Arab resource for research and network and in this capacity under the league of Arab States, so I am talking as a Jordanian and as a representative of the Arab community ,the official body , the league of Arab States , we have jointly with the European Union developed a special internet line for research in education ,now Jordan is ambitious small country ,and I will use it as example for this session ,and I am speaking not just for Jordan , not for the Arab World , for all small countries of the world , we cannot afford what you do in CN , US or Russia but we can do something different and I would like to make a proposal to you since I know how important the role you play.

My first proposal is , how about developing an online relationship , for example research about tele medicine can be done online , I do not have to have that Mega size infra structure tool kit since we are the main provider for infrastructure in capacity , so I would like to create a memorandum with you as we have the only college in the world which I established in Jordan which is unique university as it does not graduate by examination but graduates by **invention** , you will not be graduated from this school if you do not invent ,it is called TAG University of Innovation , so graduation is without examination , the exam is the invention we do not test ,the student who does not come with an invention he does not graduate , so in these capacities , we are the leading organization in providing the capacity services, I have to explore with you three things :

1. an academic cooperation with our innovation university
2. nonacademic training or capacity building programs , to provide real basic education not real academic education , training .
3. online cooperation instead of developing our own since Russia is a leader in establishing this facility in Jordan ,so we can use that facility as part of our relationship

now having aid that I would like to emphasis that it is important to note that we are building a model for all the small countries in my region ,and we can be a network like what we have with the European Union , together with my group we have partnership with European Union for this dedicated line for research ,and I would like to link this research network with you so that we can enable our researchers from accessing your scientific inventions instead of being an isolated location , we become part of your network ,and part of your work and my presence here in this conference is to send a message to Russia that we want to work with you !we want to be part of your leadership in science in technology education ,and education , for me is the soft skill trade because without education and language we cannot work together and that's why we have signed also in this forum an agreement how to teach Russian as it is very important as my Group already has an agreement with China to teach Chinese language as I am honored to be assigned by Embassy of china to be an ambassador to promote for Arab Chinese relationship as I am honored here to do the same with Russia as I am offering my hand all my resources at your disposal for a similar successful cooperation .
